

Dehydrated Winter Skin.

During the winter months skin can feel tight, dry and scaly which can all be attributed to the loss of moisture in the skin and the thickening of the outer layers of skin (stratum corneum).

Simply by accelerating the exfoliation process and allowing the secretion of your natural oils will help reduce the skin's tautness.

The application of creams and serums containing ingredients that not only form an occlusive barrier to prevent moisture loss but actually draw moisture particles from the atmosphere to the skin offer relief and comfort to dry skin. There is no need to tolerate dry skin with these technological advances where skin can be kept comfortable, supple, firm and well toned throughout the winter months.

Treatments at Beautiful Image for dehydrated dry skin.

We have a range of hydration treatments and intense moisturising skin care products help to restore skin's natural lubricants by decreasing the amount of dead skin cells which build up in the winter months. During a consultation your paramedical skin technician may recommend some of the following treatments:

Microdermabrasion Specialised Environ Treatments Dmk Specialised Peels
Green Peel IPL Photo-rejuvenation

These treatments increase the microcirculation which internally supplies nutrients to the skin and provides healthy colour and vitality. These treatments quickly stimulate rapid cell renewal encouraging the new healthy cells to migrate to the surface of the skin along with the vital lubricants that naturally hydrate the skin.

Rewards and bonuses for you throughout winter.

We offer the 'Winter Indulgence Package', which includes intense moisture treatments, customised to restore balance and provide the nutrients that your skin needs. The 'Winter Indulgence Package' is a complete three month program to guard and protect your skin right through the winter months. These winter skin care treatments keep your skin protected, hydrated and in top condition.
